

Findings Habachtal

Wonderful emeralds can be found in Habachtal, but not only emeralds, but also sphene, aquamarine, smoky quartz, pyrite and much more can be found here. The emeralds searching 2018 has been very profitable until today (18.07.2018) and by washing with the homemade sieve I could already find 10 emeralds! Also many pyrite cubes were there. The Habachtal is located in the Pinzgau and is easy to reach with the Emerald Bus, it was also built an emerald trail, the walking time is about 1.5 hours. In the Enzianhütte, the Smaragdalm or the Alpenrose can be stayed up here. No matter where you are, you will always meet new people, collectors and like-minded people. Staff and cabins are very friendly and recommendable. All in all, the Habachtal is also a small insider tip as a day trip. But there is no finding guarantee!
